JOINT PHOTOGRAPHIC INTELLIGENCE BRIEF  
ARMY-NAVY

(Published and Disseminated by CIA/PIC)

SUBJECT : Possible Missile Associated Facility NO : PIC/JB-114/60  
LOCATION: Sevastopol, USSR DATE: 27 July 1960  
COORD : 44°36'N 33°40'E

25X1D

PHOTO DATA:

MAP DATA:

ACIC. U.S. Air Target Chart, Series 100, Sheet 0250-9996-100A,  
3rd ed. (Prov), October 1957, scale 1:100,000 (S)

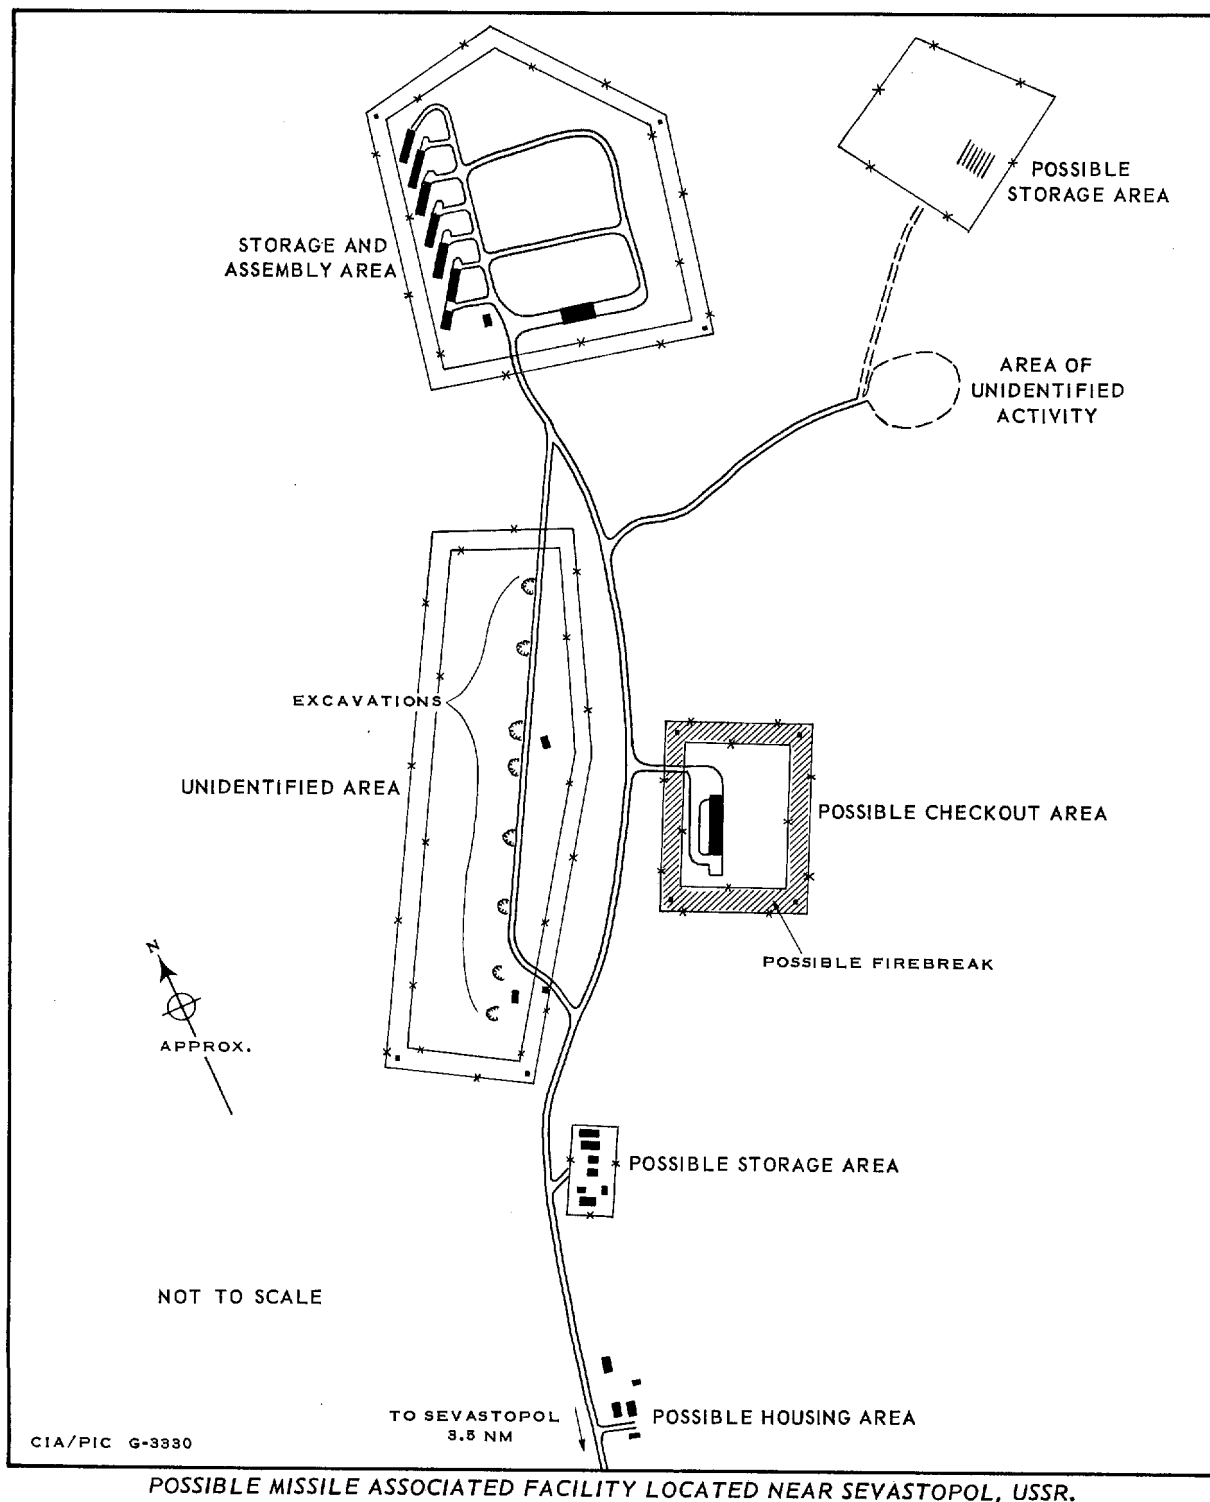

REMARKS:

Photography of [REDACTED] reveals a possible missile associ-  
ated facility approximately 3.5 nautical miles east of Sevastopol, at  
44°36'N/33°40'E. The location of this facility was also covered by poor  
quality photography of [REDACTED] and far oblique photography of [REDACTED]  
[REDACTED] the installation appeared to be nonexistent; however, there  
was evidence that some construction work was possibly being initiated.  
The [REDACTED] coverage revealed that some facilities had been constructed at  
this location. The [REDACTED] photography reveals an expanded road-served  
support facility containing several individually secured areas. These  
areas (see accompanying illustration) include a storage and assembly  
area, a possible checkout area, and an unidentified area, each secured  
by a double wire fence and guard towers. In addition, there are two pos-  
sible storage areas, each secured by a single wire fence, an area of

unidentified activity, and a possible housing area. Facilities at two of these areas, the Storage and Assembly Area and the Possible Checkout Area, are somewhat similar to facilities found at the Kapustin Yar Missile Test Range, and, therefore, are suggestive of missile related activities. The Storage and Assembly Area features a network of loop service roads, a large drive-through assembly-type building, and several long storage buildings. The Possible Checkout Area contains a single long drive-through building, and unlike the other areas, there is a possible firebreak between the two wire fences securing this facility. Of the remaining areas, the Unidentified Area contains eight excavations in the side of a hill and two small buildings. The two Possible Storage Areas contain several buildings and unidentified structures, and the Possible Housing Area contains five buildings which could provide on-site quarters for supporting personnel. Since this facility is located in the Sevastopol area, which is primarily associated with naval operations, it is considered that the installation may be naval related.
